

WORKBOOK ASSIGNMENT - 2

Q1) Create a database named CollegeDB and a table named Student. The table should contain the following columns: Column Name Data Type StudentID StudentName INT VARCHAR(50) Age Course INT VARCHAR(30) City Marks VARCHAR(30) INT Add a primary key on StudentID and insert at least 10 records.

```
CREATE DATABASE CollegeDB;
```

```
USE CollegeDB;
```

```
CREATE TABLE Student (  
    StudentID INT PRIMARY KEY,  
    StudentName VARCHAR(50),  
    Age INT,  
    Course VARCHAR(30),  
    City VARCHAR(30),  
    Marks INT  
);
```

```
INSERT INTO Student (StudentID, StudentName, Age, Course, City, Marks) VALUES  
(1, 'Alice', 20, 'BSc', 'Mumbai', 85),  
(2, 'Bob', 21, 'BCA', 'Pune', 78),  
(3, 'Charlie', 19, 'BSc', 'Delhi', 92),  
(4, 'Diana', 22, 'MCA', 'Mumbai', 88),  
(5, 'Eve', 20, 'BCA', 'Nashik', 74),  
(6, 'Frank', 21, 'BSc', 'Mumbai', 65),  
(7, 'Grace', 19, 'MCA', 'Pune', 95),  
(8, 'Heidi', 22, 'BCA', 'Delhi', 81),  
(9, 'Ivan', 20, 'BSc', 'Mumbai', 89),  
(10, 'Judy', 21, 'MCA', 'Nashik', 76);
```

The screenshot shows the phpMyAdmin interface with the 'collegedb' database selected. The 'Students' table is displayed with the following data:

StudentID	StudentName	Age	Course	City	Marks
1	Alice	20	BSc	Mumbai	85
2	Bob	21	BCA	Pune	78
3	Charlie	19	BSc	Delhi	92
4	Diana	22	MCA	Mumbai	88
5	Eve	20	BCA	Nashik	74
6	Frank	21	BSc	Mumbai	65
7	Grace	19	MCA	Pune	95
8	Heidi	22	BCA	Delhi	81
9	Ivan	20	BSc	Mumbai	89
10	Judy	21	MCA	Nashik	76

Question2.

Q2) Write a MySQL query to display all records from the Student table. The output should display all columns and all rows.

Select * from Student

This screenshot is identical to the one above, showing the phpMyAdmin interface with the 'collegedb' database and the 'Students' table. The table contains 10 rows of student data with columns: StudentID, StudentName, Age, Course, City, and Marks.

Question3

Q3) Write a MySQL query to display only the following columns: 1. StudentName 2. Course 3. City

Select studentName, course, city

From student;

Question4

Q4) Write a MySQL query to display students who belong to the city Mumbai. The output should include: 1. StudentID 2. StudentName 3. City 4. Marks

SELECT StudentID, StudentName, City, Marks

FROM Student

WHERE City = 'Mumbai';

Question5

Q5) Write a MySQL query to display students whose marks are greater than 80.

The output should be sorted by marks in descending order.

Select *

From student

Where Marks > 80

Order by Marks DESC;

Server: 127.0.0.1

Databases SQL Status User accounts Export Import Settings Replication Vari

SELECT * FROM student WHERE marks > 80 Order by Marks DESC;

Profiling [Edit inline] [Edit] [Explain SQL] [Create PHP code] [Refresh]

Show all | Number of rows: 25 | Filter rows: Search this table | Sort by key: None

Extra options

StudentID	StudentName	Age	Course	City	Marks
7	Grace	19	MCA	Pune	95
3	Charlie	19	BSc	Delhi	92
9	Ivan	20	BSc	Mumbai	89
4	Diana	22	MCA	Mumbai	88
1	Alice	20	BSc	Mumbai	85
8	Heidi	22	BCA	Delhi	81

Show all | Number of rows: 25 | Filter rows: Search this table | Sort by key: None

Question6

Q6) Write a MySQL query to display the top 3 students based on marks. The query should: 1. Display StudentName and Marks. 2. Sort marks from highest to lowest. 3. Display only 3 records using LIMIT.

Select studentName, Marks

From student

Order by Marks DESC

LIMIT 3;

Server: 127.0.0.1

Databases SQL Status User accounts Export Import Settings

Print Copy to clipboard Export Display chart Create view

Showing rows 0 - 2 (3 total, Query took 0.0019 seconds.) [Marks: 95... - 89...]

Select studentName, Marks From student Order by Marks DESC LIMIT 3;

Profiling [Edit inline] [Edit] [Explain SQL] [Create PHP code] [Refresh]

Extra options

studentName	Marks
Grace	95
Charlie	92
Ivan	89
